
Job Title: Web 2.0 Engineer (ref 7803)
Type of job: Full time

Location: Lausanne, Switzerland
Start Date: As soon as possible

Position

NEXThink is currently seeking a full time Web 2.0 Engineer to join our Lausanne office. This position requires a strong background in software development, ideally in advanced web user interfaces. As a Web 2.0 Engineer, you will work with the product management team, development and QA engineers to design and develop an innovative and highly usable web platform.

We are looking for an individual who possesses an above-average attention to detail, relishes hard technical problems and insists on excellence. This position entails high levels of responsibility. Developers have the opportunity to propose new features. Your contribution will have a significant impact on a product that is already used by dozens of major organizations.

Key Responsibilities

- Lead the NEXThink Portal UI team
- Design and implement features, enhancements, and bug fixes for our flagship product
- Help shape product architecture and roadmap for the platform
- Participate in all phases of development, from design to implementation, unit testing, and release

Qualifications

- M.S. Computer Science or equivalent
- Strong attention to details
- Excellent OO development skills (C#, Java)
- 2-4 years relevant experience
- Excellent communication and teamwork skills
- Professional-level English spoken and written
- Experience with Web2.0 technologies and frameworks (JavaScript, AJAX...) is an advantage

We offer

- An opportunity to join a growing, first-class technical team
- An enterprise culture focused on technical excellence and creativity
- Projects using cutting edge technologies and tools
- Ideal working conditions on EPFL's campus near the lake
- Challenging and rewarding activities
- A chance to live in the heart of Europe, a couple of hours from most capitals
- A competitive compensation
- NEXThink will support the work permit procedure for US Citizens

How to apply

Please send your application letter and resume via e-mail to hres@nexthink.com

Endpoint Behavioral Intelligence

NEXThink is a Swiss-based fast-growing high-tech venture founded in 2004. NEXThink's core technology, based on research initially conducted at the EPFL Artificial Intelligence Laboratory, helps to discover what is really going on in corporate networks and to understand both application and user behaviors, to manage change and ensure the right applications and quality of service to end-users.
